

FIG. 1

FIG. 2

This exploded perspective view illustrates the assembly of a circular electronic device. The components are arranged vertically, showing their relative positions and alignment. At the top is a circular cover (13) with a central opening (14) and a dashed line 'a' indicating the center. Below the cover is a circular base (10) with a central opening. In the middle is a circular component (9) with two stacked layers (9a and 9b) and two leads extending from the top. Below this is a circular component (12) with a series of vertical pins. Below that is a circular component (11) with two small circular features. At the bottom is a circular component (1) with a central opening and four small protrusions (2) around the perimeter. The central opening of component (1) is labeled 3, and the four protrusions are labeled 3a, 3b, and 3c. A vertical double-headed arrow indicates the front side (top) and rear side (bottom) of the device.
